excised from lambda ZAP; Site_1: ECOR V; Site_2: ECOR V;
excised from proper following methods: first, infected blood
blood using the following methods: first infected blood
was activated by the addition of 0.5 ml of ADP (40mg/ml)
per 10 ml blood. Then blood was passed over a column of
acid washed 0.1 mm glass beads, then through a Plasmodipur
filter, followed by passage through a column of pre-wet
whatman CF11 powder (1:2 ratio volume of blood to CF11),
and finally centrifuged through a 50% Percoll dean nuclease
in the presence of 44% formamide at 50% cas described
(vernick, K.D., Imberski, R.B., and McCutchan, TF. 1988.
Nucleic Acids Research 16:883-6896). Digested DNA was
blunt-ended using T4 DNA Polymerase and size fractionated
over a Sepharose CL-2B column. Fractions in the size range
500bp-4kb were ligated into the ECO RV site of pBluescript
sichter and sepharose CL-2B column. Eractions in the base range
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BJ138927 unpublished oligo-capped cDNA library, C. elegans Ll stage Caenorhabditis elegans cDNA clone ykl140h10 3', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota; Metazoa; Nematoda; Chromadorea; Rhabditida; Rhabditoidea

                                                                                                                                                                                                                                                                                  /note="Organ: mixed (see below); Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eoc RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-34479, and 484488-489479."

The sequence contained an oligo-dT track that was present in the Oligonotleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the Soarse Lab Clone distribution: clones will be available through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The sequence contained an oligo-dr track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the CDNA between the NotI site
and the oligo-dr track served to verify it as a clone from the
normalized rat ye library cDNA Library Preparation: M.B. Soares
Lab Clone distribution: clones will be available through Research
                                                                                                                                             Eukaryota; Motazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

The sequence tag present in the cDNA between the NoII site and the oligo-dT track served to identify it as a clone from the normalized rat brain pool library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bonaldo,M.F., Lennon,G. and Soares,M.B.
Normalization and subtraction: two approaches to facilitate gene

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized rat eye library CDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ORIGIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            five individually tagged normalized rat libraries:
brain-nRBP (20%), heart-nRHP (20%), kidney-nRKP (20%),
aorta-nRAP (20%), heart-nRHP (20%), kidney-nRKP (20%),
aorta-nRAP (20%), heart-nRHP (20%). Each original
library was constructed from a mixture of equal amounts of
RNA from seven different developmental time-points:
embryonic day 17, embryonic day 19, embryonic day 21,
adult day 12, adult day 15, and adult day 22,
adult day 17, and the placenta pool does not contain embryonic
day 17 RNA and the placenta pool contains only the three
embryonic stages). Each library was normalized
individually according to the procedure described by
Bonaldo, Lennon & Soares (Genome Research Genome 6:
791-806, 19%). For construction of the DKO subtracted
ilbrary, plasmid DNA from each of the five individually
tagged normalized libraries was mixed in the proportions
specified above and electroporated into competent bacteria
for production of single-stranded circular DNA
representing the pool of libraries. Single-stranded
circular DNA representing these five normalized libraries
was then used as a tracer in a subtractive hybridization
with a driver (PCR amplified inserts from a plasmid DNA
template preparation) comprising: a) set of about 1,000
arrayed clones from each of the five non-normalized
libraries of brain (CTOS), heart (CSOS), kidney (CUOS),
aorta (CWOS), and placenta (CXOS), kidney (CUO), and
placenta (CXO). Rhe resulting pool of about 2,000 arrayed
clones from each of the five normalized busined
placenta (CXO). Kidney (CUO), acrta (CWO), and
placenta (CXO). Kidney (CUO), acrta (CXO), acrta 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

polylinker; Site_1: Not I; Site_2: ECO RI; The UIR-DKO
library is a subtracted library derived from a mixture of
five individually tagged normalized rat libraries:
brain-nRBP (20%), and placenta-nRPP (20%). Each original
library was constructed from a mixture of equal amounts of
RNA from seven different developmental time-points:
embryonic day 17, embryonic day 19, embryonic day 21,
adult day 1, adult day 12, adult day 75, and adult day
200. (Exception: the aorta pool does not contain embryonic
day 17 RNA and the placenta pool contains only the three
embryonic stages). Each library was normalized
individually according to the procedure described by
Bonaldo, Lennon & Soares (Genome Research Genome 6:
791-806, 1996). For construction of the DKO subtracted
//decipled above and electroporated into competent bacteria
specified above and electroporated into competent bacteria
for production of single-stranded circular DNA
representing the pool of libraries. Single-stranded
circular DNA representing these five normalized libraries
specified above and electroporated into competent bacteria
for production of single-stranded circular DNA
representing the pool of libraries. Single-stranded
circular DNA representing these five normalized
libraries of brain (CTOS), heart (CSOS), kidney (CUOS),
acrayed clones from each of the five nornormalized
libraries of brain (CTOS), heart (CSOS), kidney (CUO), acrayed
clones from each of the five nornormalized
clones from each of the five nornalized libraries
clones from each of the five nornalized by a pase of brain
(CTO), heart (CSO), kidney (CUO), acrta (CWO), and
clones from each of the five nornalized of brain
competent (CSOS), kidney (CUO), acrta (CWO), acrta (CWO), acrta (CWO), acrta (CWO), acrta (CWO), acrta (CWO), acrta (

Novel protein kinase cDNA, SEQ ID NO: 47.

```
AASO6701-AASO6757 encode for novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polynucleotides or encoding protein kinase (PTK and STK) families. The polynucleotides or encoding protein kinase (PTK and STK) families. The polynucleotides prevention, diagnosis and the polypeptides may be used in the lappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoletic origin), cardiovascular faminum related diseases (e.g. rheumatoid arthritis), neurological cancers (e.g. schizophrenia), neurodegenerative disorders (e.g. disease), inflammatory disorders (e.g. asthma), infectious additionally, polynucleotides encoding protein kinases may be concerned to the protein kinases may be used for gene therapy and as DNA probes in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding human kinase polypeptides, useful for preventing

The present sequence encodes a novel protein kinase. The nucleic acids and the protein kinases they encode may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression close as immune-related diseases and/or cancers. The nucleic acids and neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as nucleic acids and sasays. The kinase polypeptides may be used as antiques in diagnostic of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antigonists may also be used to down regulate kinase antibodies and activity include rheumatoid arthritis, atheroscierosis, autoimmune activity include rheumatoid arthritis, atheroscierosis, autoimmune disorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, confluential activity including antipolatics, cardiomyopathies, carokes, renal failure, confluential activity including activity including activity including activity include activity includes.

Constitution activity includes activity activities, strokes, renal failure, constitution activity including activity including activity include disorders, channel inflammatory pelvic disease, multiple sclerosis, asthma, remarkantitis, psonialisis, rhintis, autoimmunity, diabetes, cancers and
                                                                Human; mouse; protein kinase; antiarthritic; antisclerotic; osteopathic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers
                                                                                   immunosuppressive; cardiant; renal; antiinfiammatory; antiasthmatic; dermatological; antidiabetic; antiinfertility; gene therapy; vaccine; immune disorder; cardiovascular diseases; neurodegenerative disease; cancer; autoimmune disorder; stroke; inflammatory bowel disease; inflammatory pelvic disease; multiple sclerosis; psoriasis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               58.5%; Score 22.8; DB 22; Length 2452; 79.4%; Pred. The invention provides novel human protein kinase polypeptides, 3714, 16742, 23546 and 13887 and nucleic acid molecules encoding them. The protein kinase polypeptides can be expressed by standard recombinant methodology, 3714, 16742, 23546 or 13887 nucleic acids and polypeptides are useful for diagnostic and screening methods to identify subjects (at are useful for accellular proliferation and/or differentiation cancer. 3714, 16742, 23546 or 13887 nucleic acids, polypeptides and disorders are useful for the treatment of cancer, particularly colon cancer or cellular proliferation and/or differentiation disorders. Other disorders associated with 3714, 16742, 23546 or 13887 expression or activity that can be treated include bone related disorders, inflammatory disorders, autoimmune diseases, cardiovascular disorders and liver diseases. The present sequence represents a human protein kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protein Kinase; 3714; 16742; 23546; 13887; cancer; bone disorder; human; cytostatic; antiinflammatory; immunosuppressive; cardiant; hepatotrophic;

The invention provides novel human protein kinase polypeptides, 3714, 16742, 23546 and 13887 and nucleic acid molecules encoding them. The protein kinase polypeptides can be expressed by standard recombinant protein kinase polypeptides can be expressed by standard recombinant are useful for diagnostic and screening methods to identify subjects (at are useful for diagnostic and screening methods to identify subjects (at risk of) having cancer or cellular proliferation and/or differentiation of disorders are useful for the treatment of cancer, particularly colon cancer or cellular proliferation and/or differentiation disorders. Other cancer or cellular proliferation and/or differentiation disorders. Other cancer or cellular proliferation for 1387 expression or disorders, autoimmune diseases, cardiovascular disorders, inflammatory disorders, autoimmune diseases, cardiovascular disorders and liver cancer or diseases. The present sequence represents a human protein kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; foetal protein; cytostatic; immunosuppressive; immunostimulant;

                                                                                                                                                                                                                                                                                                                                                                             Novel fetal proteins useful for the treatment and diagnosis of diseases associated with dysfunction of the protein e.g. cancers, immune disorders, growth disorders, thrombolytic disorders, nervous system disorders and inflammation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel foetal polypeptides encoded by polynucleotides comprising one of 477 sequences fully defined in the specification. The foetal polynucleotides and polypeptides are finmum disperses of diseases such as cancers, disorders, nervous system disorders (e.g. osteoporosis), thrombolytic sequence is a full length cDNA which was assembled using expressed sequence tags (ESTS) found to be expressed in human foetal tissue
                                                                                                                                                                                                                                                                                           Arterburn MC, Drmanac RA, Tang YT;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, collypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The collynucleotides are also used in diagnostics as expressed sequence tags of or identifying expressed genes. (I) is useful in gene therapy techniques (I) crestore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as imaging of sites expressing (II). (I) are useful in medical disorders involving aberrant protein expression or biological activity. (I) and gistes expressing (II). (I) are useful in medical ciscoders involving aberrant protein expression or biological activity. (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. (I) end disorders or other traits to assess blodiversity amno acid sequences of the invention.

Committee other types of data and products dependent on DNA and diagnostic coding sequences of the invention.
